Sadiq S.

Practical 10

Aim: Demonstrate an IoT based game which can be played between two player who are physically at a considerable distance

Theory:

Rules of the Game:

- The game is to be played between two people.
- One of the player chooses 'O' and the other 'X' to mark their respective cells.
- The game starts with one of the players and the game ends when one of the players has one whole row/ column/ diagonal filled with his/her respective character ('O' or 'X').
- If no one wins, then the game is said to be draw.

- The player X wins the game in the above gameplay. All boxes diagonally fill with X signs. So, the respective player wins the game.

server.listen(3000,()=>{
    console.log("port connected to 3000")
})
```

Output:

1. Enter Name:

2. Start of the game:

3. When X wins:

After a player wins, we have to again enter the name

4. When 0 wins:

5. When no one wins the game:
